

General Data Sheet for Elegant Ribbon v.3.6

Elegant Ribbon is a set of Windows Forms controls that allow you quickly and easily provide your application with a new-generation user interface like that introduced in Microsoft Office 2007. It is written in 100% managed C# and is CLS compliant.

We are using several innovative approaches to bring you the best possible and complete UI solution available on the market: **context-sensitive and windowless controls, command-oriented programming interface, XML-based skinning, and WYSIWYG and rich design-time support** in Visual Studio.
